Education

Saxion University of Applied Sciences

Bachelor's Degree, Creative Media

Enschede, Netherlands

2017-2021

Experience

Pelicaad | Fullstack Engineer

Remote | 2022 - 2024

- **Backend Systems:** Built and maintained backend infrastructure, implemented secure user authentication, as well as, a real-time commenting system.
- **Android Application:** Developed a location-based Android instant app enabling users to scan public QR codes and access location-specific content, implementing geolocation APIs and backend integration while meeting Google Play's strict instant app constraints (sub-15MB APK).
- **3D Visualization:** Developed a high-performance web-based 3D visualization platform using Mapbox, enabling users to render geospatial data, place 3D anchors, and define bounding boxes within an AR space.
- **AR Navigation:** Developed a standalone Android AR application from the ground up, utilizing Google Cloud Anchors to engineer a precise GPS-based navigation system.

Studio X | Software Engineer intern

Rijssen, Netherlands | 2019 - 2020

- **Full-Stack Architecture:** Developed a comprehensive full-stack web application from scratch, featuring a custom 3D rendering viewer to visualize glTF models via external API integration.
- **Cloud Infrastructure:** Managed cloud infrastructure using Azure, ensuring efficient storage and retrieval of complex 3D assets.
- **AR Deployment:** Delivered a cross-platform AR mobile application (iOS/Android) for a client product launch, handling the complete software development lifecycle (SDLC) from initial development to launch.
- **Technical Visualization:** Developed complex interactive animation sequences, resulting in the application being utilized as the primary showcase tool during an official industry product conference.

Independent Developer | Freelance

Remote | 2014 - Present

- **Web Development:** Delivered custom web solutions for freelance clients, including a complete website overhaul for a local educational institution, translating specific client requirements into a functional, user-friendly interface.
- **Digital Asset Commerce:** Developed and commercialized professional engine tools on the Unity Asset Store.
- **End-to-End Development:** Solely developed and published a commercial video game on Steam, managing the entire production pipeline from programming and asset creation to market release.
- **Technical Education:** Produced instructional video courses on YouTube covering software engineering and game development; provided active debugging support and mentorship to developer communities on Discord.

Skills

Programming Languages:	JavaScript/TypeScript, C#, Java, HTML5, CSS/SCSS
Backend Frameworks:	Express, Node.js, ASP.NET Core
Frontend Frameworks:	React, Vite, Tailwind, Bootstrap
Databases & ORMs:	PostgreSQL, MongoDB, SQL Server, Prisma, EF Core
Deployment & CI/CD:	Docker, Azure DevOps, GitHub, Netlify, Render
Testing & Tools:	Jest, xUnit, Testcontainers, Zod, BullMQ, Axios, RESTful, API Versioning

Languages

English: C1

Lithuanian: Native

Secure Dashboard

TypeScript, Postgres, Prisma, Redis, Express, BullMQ, React, Tailwind

Github (<https://github.com/Rukas90/SecureDashboard>)

- **Authentication:** Secure user authentication via credential-based login, OAuth 2.0 (Google, GitHub), and TOTP-based multi-factor authentication, with full MFA enrollment, verification, and revocation flows supported by emergency backup codes.
- **Authorization & Token Management:** JWT-based access control with refresh-token rotation using revocable token families, scope-aware permissions, and session-bound security guarantees where session revocation triggers immediate JWT invalidation via a Redis session blacklist.
- **Session & Account Lifecycle:** Session management including enumeration, activity tracking, selective revocation, and forced logout, alongside account operations such as registration, password updates, lost password recovery, account deletion, and email verification via OTP codes and token-based workflows.
- **Security Controls:** Full-stack TypeScript monorepo with stateless double-submit CSRF protection, CAPTCHA enforcement, rate limiting, encrypted verification dispatch payload, and RFC-9457 compliant error handling.
